

Grant

This DCL command grants permissions to the user on the database objects.

It assigns access rights to users.

For each user you need to specify the permissions.

When the access is decentralized granting permissions will be easy.

Syntax:

```
grant privilege_name on object_name  
to {user_name | public | role_name}
```

```
grant insert,  
select on accounts to Ram
```

Revoke

This DCL command removes permissions if any granted to the users on database objects.

It revokes the user access rights of users.

If access for one user is removed; all the particular permissions provided by that users to others will be removed.

If decentralized access removing the granted permissions is difficult.

Syntax:

```
revoke privilege_name on object_name  
from {user_name | public | role_name}
```

```
revoke insert,  
select on accounts from Ram
```
